

Installing VersionUp

Four steps. About a minute.

1

Download the file and double-click it

Open the order email from NK Courses. It has your licence key and your download link. Download VersionUp.ccx and double-click it — Creative Cloud Desktop installs it for you, nothing to unzip.

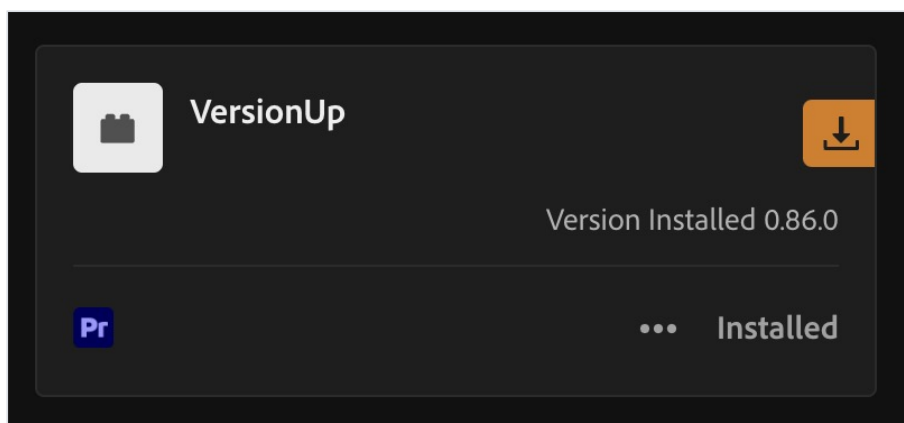

Your order email — download VersionUp.ccx, then double-click it

2

Restart Premiere Pro

Quit Premiere and open it again. Premiere only looks for new panels at startup.

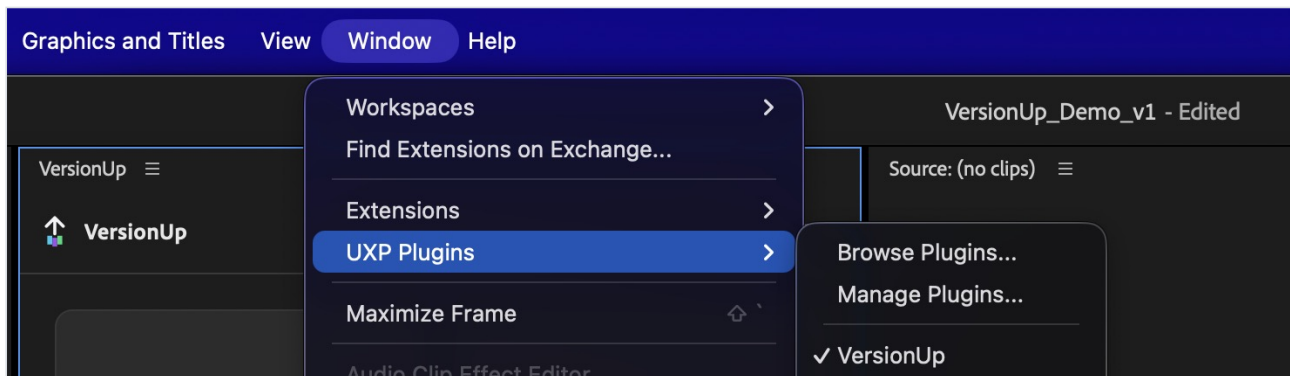

Creative Cloud Desktop shows Installed — now restart Premiere

3

Open the panel

In Premiere, go to Window > UXP Plugins > VersionUp.

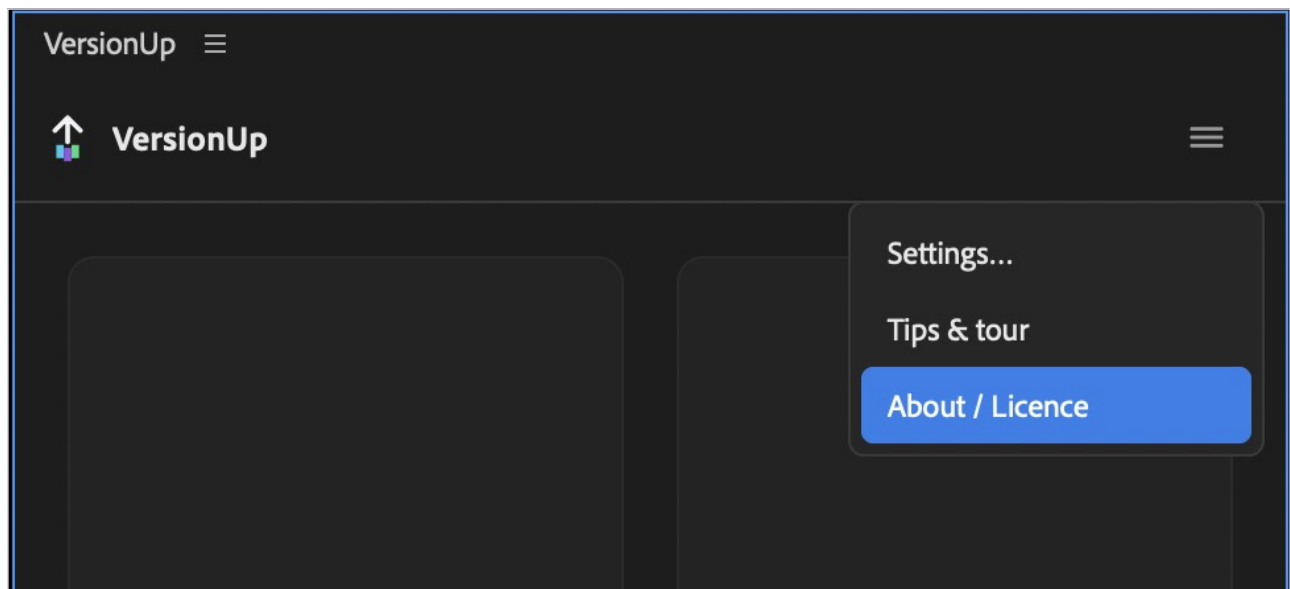

Window > UXP Plugins > VersionUp

4

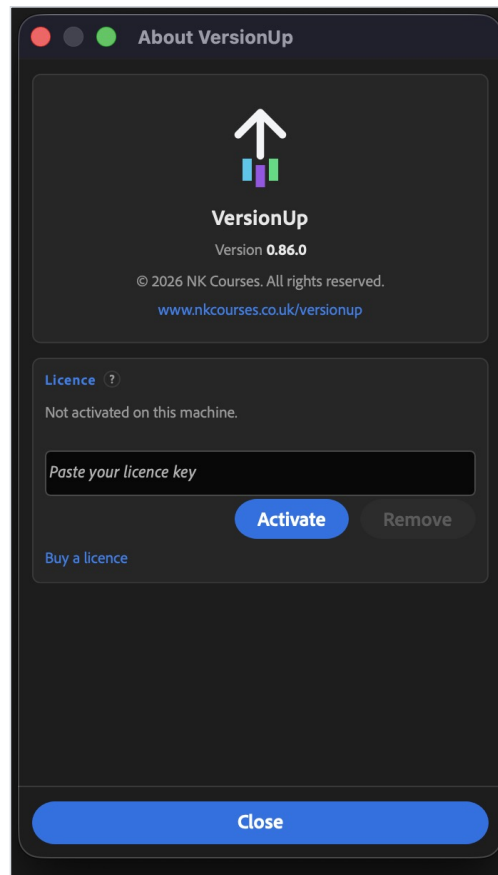

Paste your licence key

Click the burger menu button at the top-right of the panel and choose About / Licence. Your key is in the order email.

The burger menu, at the top right of the panel

Paste the key into the field and press Activate. The panel unlocks straight away — there is nothing to restart.

Paste your key and press Activate

If something doesn't go to plan

Double-clicking did nothing.

Open Creative Cloud Desktop first, then double-click the file again.

VersionUp isn't in the Window menu.

Check Premiere Pro > About Premiere Pro. VersionUp needs 25.6 or newer.

The key was refused.

Re-copy it — a trailing space is the usual culprit. It runs on two machines; press Remove on a machine you no longer use to free a seat.

Your licence

One key, two machines — a desktop and a laptop, or a work machine and a home one. Changing computer? Open About / Licence on the machine you are leaving behind and press Remove. That frees the seat immediately.

Still stuck? Reply to your receipt, or email support@nkcourses.co.uk.
I'm one person, so it might take a day — but it will be me answering.
